When he heard of the move and the plan, Horseback, a Comanche Chief of distinction, complained that he did "not think the agent has good sense."[21] Horseback's judgment was sound. The Comanches, wanting neither to farm nor to live among the Kiowas, refused to congregate near the new agency site. Since they refused to move near the agency, they were left largely to their wits. Their grass-fed teams were too small and too weak to break the tough prairie sod near Fort Sill. As a result, they made very little progress in agricultural pursuits until after the reservation had been opened to white settlement and a younger generation had learned something of farming and stock-raising in school.

Agent Hunt realized the futility of attempting to make farmers of the Comanches and advocated that they be made stock-raisers, but he made little progress in his efforts and successive agents adhered to the policy of making farmers of them. During the years preceding the innovation of grass leasing, a few Comanches were persuaded to take up farming to better their economic condition. When Agent Day collected grass-lease rentals, he used part of the money to encourage farming. Agent Day reported that in 1892 the Indians of the reservation cultivated 5,000 acres and the agency an additional 500; that of the 800 acres of sod broken during the year, all but 60 had been broken by the Indians; that the 3,782 Indians on the reservation owned 10,000 horses, 300 mules, 25,000 cattle, 3,000 swine, and 75 sheep and goats; and that agricultural products marketed by the Indians during the year amounted to $3,550.25.[22] The accuracy of the agent's statistics is subject to question. Some of the livestock probably belonged to white ranchers who were clever enough to get free grass on the reservation. In 1910 the agent estimated that two per cent of the Indian population were stockmen, each owning from 10 to 50 head of cattle. At the same time he reported that there were some 600 Indian farmers on the reservation, approximately 15 per cent of the

population, cultivating 15,000 acres in tracts ranging from 5 to 160 acres.[23] 657 241

Progress continued at about the same pace. In 1929 the crops were valued at $400,000, the agricultural implements and vehicles at $600,000, and the livestock at $286,000, and the Indian Office was urging the unemployed to refrain from leasing any land that they could utilize profitably.[24] The lower values reported for agriculture during the next few years represent the effects of the depression rather than a retrogression. In 1942 the income from agriculture was approximately $600,000. 657 241 433 [422] [458] [434]

The principal crops include cotton, wheat, corn, alfalfa, oats, and sorghum. Cotton, with an average annual yield of about 150 pounds of lint per acre, has been the leading cash crop. The Washita and Red River bottoms are well adapted to corn, producing an average of thirty bushels an acre. Grain sorghums thrive on the uplands and are utilized as feed for livestock. Wheat, grown on the level and rolling plains, averages about twelve bushels an acre. The pasture land has been over-grazed and in 1945 had a carrying capacity of only one cow to seven acres. 241 248 435 243 433 [246] 233 433

The Extension Service has rendered valuable assistance to the farmers. The older Indians are not interested, but the younger land owners are accepting its services. The Extension farm program has supervised and instructed the Indians in handling livestock, the preparation of the soil, the varieties of crops to plant, and methods of crop cultivation. It supervised the terracing of 18,646 acres of land in 1935. Farmers who terraced received concrete or masonry dams without cost.[25] 657 241

Credit and rehabilitation have been another phase of the Extension Service program. The Wheeler-Howard Act of 1936 made federal loans available to worthy Indians engaged in farming. By June, 1945, a total of 331 loans amount- 657 241 426
